Education

Cornell University

August 2021 – May 2024 (Expected)

- Computer Science Major, 4.077/4.00 GPA
- Courses: Object-Oriented Design and Data Structures - Honors, Data Structures and Functional Programming, Discrete Structures, Intro to Analysis of Algorithms, Intro to Machine Learning, Computer System Organization and Programming, Intro to Compilers, Operating Systems, Intro to Computer Vision, Data-Driven Web Applications, Intro to Database Systems

Experience

Google, STEP Intern

May 2023 - August 2023

- Developed and integrated the UI for promotional offers on the browser-based Google Play store using Typescript and Closure Templates with Google's lightweight UI framework
- Designed transfer and storage of user-inputted gifting information into protocol buffers
- Applied test-driven development by creating unit and integration tests in Jasmine

Frutto Research Group, Summer Intern

June 2022 – August 2022

- Built a decentralized exchange (DEX) operating on the Avalanche Fuji Testnet using Solidity and ReactJS with verified token swapping under various price fluctuations.
- Presented an adapted version of the Proactive Market Making (PMM) algorithm at the 2022 IC3 Blockchain Camp by researching capital inefficiencies in decentralized markets.

Cornell University, Undergraduate Consultant

August 2022 – May 2023

- TA for Object-Oriented Design and Data Structures - Honors (FA22) and Discrete Structures (SP23)

Projects

The Whether Bee – Instant Messaging Web Application, [github.com.stanleyjiang25/Webchat](https://github.com/stanleyjiang25/Webchat)

- Created a fully-functioning instant-messaging web application with chatbots for users to talk to.
- Used OCaml (including Opium and Caqti third-party libraries) to create endpoints on our back-end system and support other back-end functionality.
- Efficiently stored and queried user data in a database with PostgreSQL.
- Built a graphical front end in a web browser using Javascript and VueJS.

Trainstris – Tetris Training Platform, github.com/stanleyjiang25/Trainstris

- Developed the first Tetris training platform with step-by-step instruction using ReactJS.
- Produced revolutionary scoring methodology to evaluate Tetris board states and end mindless practice.

Eta Compiler

- Created an optimizing compiler targeting x86 for Eta and Rho (C-like, imperative, procedural languages).
- Implemented compiler optimizations including register allocation, move coalescing, copy propagation, dead code elimination, and function inlining.
- Utilized JFlex for lexer generation, CUP for parser construction, and Java for type checking and intermediate code/assembly generation under our self-designed stack frame layout.

Activities

Math Talk on Bézier Curves, stanleyjiang25.github.io/BezierCurves.pdf

May 2021 – August 2021

- Explored the mathematical modeling capabilities of Bézier curves on polynomial functions to assess the possibilities and limitations of Bézier curves in computer graphics.

Programming Languages and Frameworks: Java, OCaml, JavaScript, TypeScript, Closure Templates, HTML/CSS, C++, Solidity, ReactJS, PostgreSQL, VueJS, \LaTeX , JavaFX

Clubs: Cornell ICPC, Cornell Science Olympiad, Cornell Undergraduate Math Club

Interests: Tetris, piano, drawing, clarinet, and overused jokes
